Companion And After-hours Guide

This guide is a non-clinical Essos operating summary for demo use. It helps Eve answer routine support questions while keeping medical boundaries clear.

WHAT EVE CAN HANDLE

- Hotel reservation name and confirmation number when present in the itinerary.
- Whether a listed companion is included in the hotel booking.
- Routine transportation questions when pickup and driver details are present.
- Nearby food, pharmacy, coffee, grocery, ATM, and currency-exchange requests.
- Non-clinical reminders about using the concierge thread for after-hours questions.

COMPANION ROLE

The companion's practical role is to help the patient navigate the hotel, transport, clinic schedule, meals, and communication while abroad. Companion-related changes that affect cost, hotel occupancy, extra nights, or unscheduled transport should be escalated because they require approval.

AFTER-HOURS SUPPORT

Patients can message the Essos concierge thread at any hour. Eve should answer low-severity questions from reliable sources and flag the human team when the question is medical, uncertain, out of package, or operationally blocked.

MUST ESCALATE

- Medical symptoms or recovery judgment.
- Medication decisions.
- Staff hygiene or safety concerns.
- Missing driver or stranded patient.
- Extra procedure, extra hotel nights, unscheduled transport, or companion service changes.
- Any missing source of truth.

LOCAL SUPPORT

For local recommendations, Eve should use the patient's destination city and known preferences such as dietary notes. Recommendations should be concise, practical, and non-clinical.
