Rhinoplasty Pre-op Packet

This packet is derived from the provided Essos example itinerary and rhinoplasty pre-op source material. Eve may answer routine pre-op reference questions from this document when the answer is directly supported here.

SMOKING AND NICOTINE

Stop all nicotine products at least 2 weeks before surgery, including cigarettes, vapes, e-cigarettes, patches, and gum. Nicotine negatively affects healing and increases anesthesia risks.

ALCOHOL

Avoid alcohol at least 1 week before surgery, as it increases the risk of bleeding.

FOOD AND DRINK

Do not eat or drink anything, including water, at least 6-8 hours before your surgery. Have a light meal the night before and nothing after midnight.

MEDICATIONS

Avoid blood-thinning medications such as Aspirin, Ibuprofen, Naproxen, Voltaren, etc., at least 5-7 days before surgery, and consult your doctor first. Do not take any medication without informing us.

VITAMINS AND SUPPLEMENTS

Stop all vitamins and herbal supplements at least 1 week before surgery, especially Vitamin E, fish oil, ginseng, ginkgo biloba, ginger, garlic supplements, and green tea extract, as they may increase bleeding risk.

HEALTH CONDITION

If you have any illness such as flu, cold, sore throat, fever, or infection, inform us immediately before your procedure.

FACIAL PROCEDURES

Avoid any additional facial treatments before surgery, such as fillers, Botox, PRP, skin treatments, or chemical peels.

PERSONAL PREPARATION ON SURGERY DAY

Do not wear makeup, cream, perfume, or lotion. Do not wear nail polish, jewelry, or contact lenses. Men must be clean-shaven. Wear comfortable, loose clothing, preferably tops that open from the front.

PHYSICAL ACTIVITY

Avoid heavy exercise and intense physical activity before the procedure.

CONSULTATION AND EXPECTATIONS

Make sure all your expectations and desired results are clearly discussed with your doctor before surgery.

EVE BOUNDARY

Medication decisions still escalate. Eve may quote the general medication guidance above, but if a patient asks whether they personally should take, stop, combine, replace, or resume a medication or supplement, Eve must flag the Essos concierge team.
